/Weilun Lo/ Supervisory Patent Examiner, Art Unit 2179								

Continuation of 11. does NOT place the application in condition for allowance because: The 35 USC 112 claim rejection remains. Applicant provided in remarks that cited paragraphs 1-6, 44-47, 51, 54-59 and 99 from specification supports the claims. These paragraphs to do not define two-dimensional data, specifically the limitation "generating a 2D image frame", "first 2D user input data", "wherein said first 2D user input data comprises x,y coordinate input data". In paragraph 51 of the PG-Pub it is defined that the application data 403 includes node data 406-411 to be processed in order to generate the current image frame (wherein the first limitation is the generation of an image frame). Thus the image frame

is made up of application data 403 which is made up of at least node data 406-411. Paragraph 52 defines node data, i.e. 406 as being three-dimensional data not two-dimensional data. Throughout the whole disclosure the invention is concerned with three-dimensional space (for example par. 52, 53, 71-73, 79-83, 98, 102, 122-124...). Applicant makes the statement that RGB data as described in paragraph 47 is 2D data as known in the art. Examiner does not agree as known in the art RGB data is a set of values to reference a color for a pixel to be rendered for a desired medium, does not limit it nor describes itself as "2D data". Applicant makes mention that paragraph 46 of specification mentions that bitmap files are used as textures for 3D model and is apart of node data; Examiner notes that Grinstein teaches this as depicted in figure 71, item 610. The specification describes in detail of a 3D scene displayed within a 3D display port comprising 3D models and the user being able to see a hierarchical structure of the scene. Examiner has shown how Grinstein teaches this same exact system in the previous rejection and maintains the rejection. Further Grinstein teaches a x y plane and editing on that plane (col.37, line 57; thus 2D plane and 2D xy input data is present within Grinstein). Examiner would recommend amending the claims away from 2D data towards 3D data and how the method of displaying a scene and interacting with the scene is different from Grinstein.

Continuation of 13. Other: Claim objection for claim 25 is withdrawn due to amendment. Specification objection is withdrawn due to amendment.
